

## **How do I burn Swan Server software to a CD?**

You need special software to burn Swan Server Software to CD because you must burn an ISO image. Unlike other operating systems, Windows cannot create or copy ISO images. However, there is special software that you can install on Windows to burn ISO images. Image files, unlike the music and videos files that you burn, cannot be opened; rather, they must be mounted. ISO images are mainly used as source files from which to create CDs.

**Tip:** Burn the image to two CDs so that you have a backup, or save the ISO image so that you can make a backup CD later.

Once you download the image (.iso file) from Symphony's website, simply use ISO CD burning software to recreate the physical CD-ROM install media.

Tip: Double-clicking the downloaded .iso image file will likely launch your burner software with the image file preselected. When your burner software has launched, simply insert a blank disc and click the Write button.

### **To recreate the physical CD-ROM install media (using Burn At Once software):**

1. Launch the interface.
2. Click File.
3. Click Load New Image...
4. Select the Swan CD image file that you downloaded and saved to your computer.
5. Insert a blank CD-R disc, and click the Write button.

### **ISO CD Burners:**

OS	Product	Download
Windows	CDBurnerXP (Free)	<a href="http://cdburnerxp.se/download.php">http://cdburnerxp.se/download.php</a>
Windows	InfraRecorder (Open source)	<a href="http://infrarecorder.sourceforge.net/">http://infrarecorder.sourceforge.net/</a>
Windows	Burn At Once	<a href="http://www.burnatonce.net/downloads">http://www.burnatonce.net/downloads</a>
Windows/Vista	ISO Recorder (not tested by Microsoft)	<a href="http://isorecorder.alexfeinman.com/isorecorder.htm">http://isorecorder.alexfeinman.com/isorecorder.htm</a>
Windows	Nero	<a href="http://www.afterdawn.com/software/cdr_software/cdr_applications/nero.cfm">http://www.afterdawn.com/software/cdr_software/cdr_applications/nero.cfm</a>
